

So pure and innocent.  
(Shouldn't the air she's breathing be that way too?)

Indoor air can be 2-5x more polluted than the air outdoors. That's not exactly child friendly.

Many household products release potentially harmful chemicals into the indoor air, putting your family's health at risk. GREENGUARD Certified products meet stringent indoor air quality standards, improving indoor air quality. To make sure you are choosing healthier products for your home (and the air you breathe), choose GREENGUARD Certified products. Visit [greenguard.org/fp](http://greenguard.org/fp) to find out more.
